

Object oriented programming

The student will analyze, design, and code computational algorithms through the object-oriented programming paradigm to solve problems in the productive field and implement efficient solutions.

Contribution of the subject

Develop technological solutions through structured programming languages, object-oriented programming and query languages computer-aided software development tools.

To DO 60%	Learning Units	Hours
To know 30%	I-modeling	6
To Be 10%	II-Syntax and	
100%	documentation of	11
	object-oriented language	
	III. Management of data	
	and good practices of	11
	Coding	
	IV. Development environments	14
	and design of applications	

Evaluation Dates

28-29 Sep - Unit 1
20-27 Oct - Unit 2
17-18 Nov - Unit 3
07-08 Dec - Unit 4
